

LION Floor™

LION Floor™ is the first hardboard panel to be designed and manufactured specifically for the flooring industry.

LION Floor™ has been specifically designed to take into consideration the exacting requirements of the flooring industry, and is fully compliant with CFA Guidance and BS8203:2017 code of practice for installation of resilient floor coverings.

The CFA recognised the need for a flooring industry standard for fabricated underlays, and oil-tempered hardboard is now specifically noted within the guide as being suitable for use as a fabricated underlay.

The CFA guide to contract flooring is very successful and has become a comprehensive guide for designers, wholesalers and installers throughout the flooring industry.

Further work by the BSI has been undertaken to produce guidance into what panel products can be used as a fabricated underlay for resilient flooring, and LION Floor™ is fully compliant with their guidelines.

This significant development for the industry ensures that manufacturers and installers have a clear reference on the specification of what can be used as a fabricated underlay and what must be used for a successful and reliable installation. Trained fitters that are working to BS 8203:2017 now need to ensure they are using the correct specification of material. By using LION Floor™ installers can have confidence that they are using an engineered panel that meets this new exacting standard.

Unlike many plywoods, LION Floor™ is an engineered product, that can give cast iron assurances that it will not contain any core gaps, and as an engineered board, it is impossible to have an 'veneer overlaps' or filler, which is common in many plywoods, thus guaranteeing a homogenous board.

Manufacturers of LVT, adhesives and all other allied products have welcomed this addition to the BS 8203 standard, as it now ensures their products are used alongside fabricated underlays that are approved and fit for purpose.

LION Floor™ is readily available throughout the UK ; please see our website for details of stockists

Certificates

CE marked in accordance with requirements of EN 13986:2004+A1:2015 standard

The classification presents emission requirements for the building materials, fixture and furniture without padding or textile coverings used in ordinary work spaces and residences with respect to good indoor air quality. M1 stands for low emissions. m1.rts.fi/en

PEFC certificate: Promoting sustainable forest management
